## 1 Equations

ODE system to be integrated in time:

$$\dot{\Omega} = \frac{N_{\rm dip} + N_{\rm acc}}{I} \tag{1}$$

$$\dot{t}' = \mathcal{D} \tag{2}$$

$$\dot{\Gamma} = \mathcal{D} \tag{2}$$

$$\dot{\Gamma} = \frac{(L_{\text{sd}} + L_{\text{ra}} - L_{\text{e}}) - \frac{\Gamma}{\mathcal{D}}(\xi L_{\text{sd}} + L_{\text{ra}} - L_{\text{e}}) + \Gamma \mathcal{D} \frac{E'_{\text{int}}}{3V'}(4\pi\kappa^2\beta c)}{M_{\text{ej}}c^2 + E'_{\text{int}}} \tag{3}$$

$$\dot{E}'_{\text{int}} = \mathcal{D} \left[ \frac{1}{\mathcal{D}^2}(\xi L_{\text{sd}} + L_{\text{ra}} - L_{\text{e}}) - \frac{E'_{\text{int}}}{3V'}(4\pi\kappa^2\beta c) \right] \tag{4}$$

$$\dot{V}' = 4\pi\kappa^2\beta c\mathcal{D} \tag{5}$$

$$\dot{E}'_{\rm int} = \mathcal{D} \left[ \frac{1}{\mathcal{D}^2} (\xi L_{\rm sd} + L_{\rm ra} - L_{\rm e}) - \frac{E'_{\rm int}}{3V'} (4\pi\kappa^2 \beta c) \right]$$
 (4)

$$\dot{V}' = 4\pi\kappa^2 \beta c \mathcal{D} \tag{5}$$

$$\dot{R}' = \frac{\beta c}{1 - \beta} \tag{6}$$

Various functions:

$$\beta(\Gamma) = (1 - \Gamma^{-2})^{-1/2}$$

$$\mathcal{D} = [\Gamma(1 - \beta \cos \theta)]^{-1}$$
(8)

$$\mathcal{D} = [\Gamma(1 - \beta \cos \theta)]^{-1} \tag{8}$$
